// ABOUT

Full-stack and mobile developer: web applications, mobile clients, backend APIs and business-process automation. I take projects end to end – from database and API design to client build and CI/CD deployment. Separately, applied ML on customer data: segmentation, churn prediction, recommendations. Software Engineering graduate, 2026. **Looking for a junior/middle role, an internship or contract work – remote and in international teams.**

// STACK

LANGUAGES

TypeScript

JavaScript

Dart

C#

Python

Rhino

// EXPERIENCE

FULL STACK ENGINEER & PROJECT MANAGER

MAR 2026 – PRESENT

MomentumX.Club – remote, Germany

- * Run client projects both as a developer and as a **PM**: requirements → breakdown and task assignment → acceptance → deployment → support. Took the studio site **momentumx.club** (Next.js + ASP.NET Core) from brief to release.
- * Built the client communication service myself: enquiries from the site land in **Telegram**, a bot answers on behalf of the company and hands the conversation over to a manager.
- * Launched a game-server hosting line with donation monetisation: Docker on Linux, Tebex, LAVA and CryptoBot integrations, automatic privilege granting.
- * Client process automation: a **117-node** n8n workflow – auto-posting, content processing and routing, social network API integrations.

TECHNICAL DESIGN ENGINEER & 3D SPECIALIST

JAN 2022 – JUL 2026

Freelance / Remote – Upwork, international clients

- * High-precision 3D modelling and technical documentation: manufacturing tolerances down to **0.01 mm** and complex geometric constraints.
- * Full project cycle: brief → data organisation and SQL → production-ready assets → handover to the client.
- * Brought AI tools into design and documentation work to cut manual effort.

// EDUCATION

T. G. SHEVCHENKO INSTITUTE OF ENGINEERING AND TECHNOLOGY

SEP 2022 – JUL 2026

BSc – Software Engineering

- * Thesis: an intelligent premium loyalty management system with an ML module. Defended.

RUSSIAN – NATIVE // ENGLISH – B2, TECHNICAL DOCUMENTATION AND CLIENT CORRESPONDENCE //
UPWORK.COM/FREELANCERS/~01FE86EE9387721EC2

// PROJECTS

AURA SCANNER – MOBILE DOCUMENT SCANNER IN FLUTTER

MAY – AUG 2026 • GITHUB.COM/NEKOPUNK44/AURA-SCANNER • 238 COMMITS • 474 TESTS • CI

- * Live document edge detection in the camera stream with **OpenCV**: Canny, morphological closing, contour search; the work runs in isolates so the preview never stutters.
- * Replaced the paid **Scanbot SDK** with my own passport page detection: spread fold search, MRZ band scoring, a filter for through lines of the scene, auto-capture once the frame settles.
- * A pure Dart pipeline from a table photo to XLSX: words with coordinates from HOCR, grid detection by line projections, clustering into rows and columns when no grid is drawn.
- * Two Flutter clients (scanner and signature module) plus an Express/TypeScript backend: 38 endpoints, five OAuth providers, refresh token rotation with a queue for deferred requests.
- * Export to PDF/XLSX/PPTX, OCR on two engines (Tesseract + ML Kit), offline translation, Sentry crash reporting, GitHub Actions on every push.

AVTotime – SOCIAL PLATFORM FOR CAR OWNERS

MAY – AUG 2026 • AVTotime.ORG • GITHUB.COM/NEKOPUNK44/AVTotime • MONOREPO OF 4 CODEBASES

- * Node.js 20 / Express 5 backend: **156 endpoints**, 25 indexed MongoDB models, Socket.IO for chats and notifications, a Redis cache, cluster with graceful shutdown.
- * Three clients on one API: a web social network (React 19, Redux Toolkit), a separate TypeScript marketplace and a **56-screen Expo mobile app**.
- * Marketplace with 8 listing types, paid plans and Stripe payments, a road rules trainer, posts and stories, AI moderation with a local offline fallback.
- * Deployment: a 5-service Docker Compose, Nginx with TLS and rate limits, backend auto-deploy on push through GitHub Actions.

LOYALTY_APP – PREMIUM LOYALTY MANAGEMENT SYSTEM

DEC 2025 – JUN 2026 • BSC THESIS • VILLA JACONDA HOTEL • VILLAJACONDA.COM • GITHUB.COM/NEKOPUNK44/LOYALTY_APP

- * Mobile app (React Native / Expo) + backend (Node.js / Express, PostgreSQL, Redis) + ML service (Python / FastAPI, scikit-learn).
- * RFM customer segmentation with k-means – silhouette **0.54**; churn prediction with Gradient Boosting – ROC-AUC **0.83**; per-cluster personal recommendations.
- * Four membership tiers with 3-10% cashback and perks; the programme storefront runs on the hotel site.
- * Docker, CI/CD through GitHub Actions, hosted on Railway.

AI-QUANT INSIGHTS – MARKET HYPOTHESIS TESTING TOOL

JUL – AUG 2026 • GITHUB.COM/NEKOPUNK44/QUANT • TS + PYTHON MONOREPO

- * The statistics that guard against overfitting are written **from scratch in TypeScript**, with no external libraries: Deflated Sharpe, Probabilistic Sharpe corrected for skewness and kurtosis, PBO, Monte Carlo. The backtest core has zero runtime dependencies.
- * Walk-forward: parameters fitted on the train window, scored on an untouched test window, the out-of-sample curve stitched across folds.
- * A verdict with a mandatory cost stress test: runs at 1x/2x/5x friction and downgrades the score automatically when the result does not survive.
- * An LLM extracts hypotheses from transcripts and articles into a JSON DSL; a deterministic engine compiles them into a strategy and rules by calculation rather than by the model's opinion.

ENARD – VOICE ASSISTANT WITH A LOCAL LLM

JUL – AUG 2026 • GITHUB.COM/NEKOPUNK44/ENARD • NODE + ELECTRON + EXPO + PWA

- * Runs offline: the model through **Ollama**, speech recognition with local **whisper.cpp**, Piper TTS synthesis; the cloud is optional and switched on with a single key.
- * Hub model: the computer holds the model and the storage, phone and browser are clients of one REST + WebSocket protocol; a command can be addressed to a neighbouring device.
- * Device pairing by a one-time code with a QR; only the sha256 hash of the token is kept on disk; system commands need two-phase confirmation.

MYTHORY – WEB NOVEL PLATFORM, IN PROGRESS

SINCE JUN 2026 • GITHUB.COM/NEKOPUNK44/MYTHORY • REACT 19 + VITE + SASS • DESIGN IN FIGMA

- * Reader and author in one product: chapter by chapter reading, bookmarks, your own stories and an editor. The design covers **35 screens across three widths**; the storefront is built, the reader, the chapter editor and the dashboard come next.

ZENPULSE – MEDITATION APP IN EXPO / REACT NATIVE

MAR 2026 • PROTOTYPE: SESSION LIBRARY, PAYWALL AND SUBSCRIPTIONS, TIMER WITH BREATHING PATTERNS, DAILY AI PICK
